

Curtain Transvectors

Air Knives Deliver Flat Sheet of Amplified Air

ITW Vortec Curtain Transvector® Air Knives efficiently blowoff wide surfaces of debris as well as provide high speed drying or cooling for a broad range of industrial applications. Ionizing Curtain Transvectors® add a Static Neutralizing Bar to kill static cling and discharge dust and particles for blowoff.

Since Curtain Transvectors® are air amplifiers, they use a small amount of compressed air to deliver a powerful, high velocity, laminar sheet of air over wide areas such as moving webs, film, sheets, strips, auto bodies and other large assemblies and objects. Our patented design produces increased thrust and velocity, reduced noise, excellent uniformity, and significantly outperforms any competing, wide blowoff device. Stainless steel models are ideal for food, pharmaceutical, chemical and other applications where purity, high temperatures or corrosive environments are concerned.

More Compact and Affordable Than Electric Blowers

APPLICATION

notes

On an automated fabric cutting machine, a problem-prone, retracting clamp bar was replaced with two #921-24 Curtain Transvectors. The maintenance free air knives hold the fabric in position for slitting and blow away any loose threads.

After testing many different products, a sheet metal fabrication plant stamping oil pans for automobile engines determined that a #921-18 Curtain Transvector was ideal for replacing their inefficient, drilled-pipe blowoff. The patented air knife did a superior job of stripping moisture and debris from the pans, while reducing air consumption.

A German packaging company increased production rates of their label printing equipment by 34% when a #921-12 Curtain Transvector was installed to speed ink drying.

Cooling parts emerging from a powder coating oven had been the problem for a metal finishing firm until they mounted #921-24 Curtain Transvectors on each side of the product to quickly dissipate the heat.

Curtain Transvectors®, as well as the Ionizing versions, have numerous and diverse processing, finishing, fabrication, assembly, and other industrial uses for cooling, drying, cleaning or static removal on wide surfaces, including:

- ◆ Food processing
- ◆ Shrink wrapping
- ◆ Clean room procedures
- ◆ Form and fill
- ◆ Films and plastics
- ◆ Textiles
- ◆ Printing and labeling
- ◆ Converting and packaging
- ◆ Woodworking and laminates
- ◆ Paint preparation and drying
- ◆ Sheet and web materials
- ◆ Conveying or hold down

High performance patented design

Fraction of the cost of fans and blowers

No guards or rotating machinery

Instant on/off — output air easily regulated

Compact and easily mounted

No moving parts — maintenance free

Quiet — meets OSHA noise specifications

Curtain Transveectors

Curtain Transvector Models:

OAL – Overall Length

EFFECTIVE LENGTH	ALUMINUM		STAINLESS STEEL			IONIZING

* At 30" from Curtain Transvector outlet.

TECH notes

The Curtain Transveectors' amplification uses an impulse principle to accelerate a large mass of stationary air with a thin sheet of sonic-velocity compressed air. When compressed air enters the Transvector, it fills a plenum which has only one exit path - a linear .002" gap running the length of the curtain. As the air is forced out of the orifice, it accelerates and collides with surrounding air entraining a great volume of free, ambient air. The result is an air knife that delivers a large volume of output air in return for a small amount of compressed air.
